Scheme of Examination and Syllabus

M.Sc. Biotechnology

Delhi Technological University

Bawana Road

New Delhi -110042

DEPARTMENT OF BIOTECHNOLOGY

History

Department of Biotechnology was founded in 2004 with a vision to make an impact through research and technology-based training. The department has teaching and research programs which encompass various basic and applied aspects of modern biotechnology.

Objective of Biotechnology Department

The main objective of the Department is to provide academic training and conduct research in interdisciplinary areas of biotechnology with particular emphasis on extending the knowledge generated from these studies towards the development of technologies of commercial significance.

Courses Offered by the Department

Department of Biotechnology offers B.Tech Biotechnology, MSc. Biotechnology, M.Tech Bioinformatics, M. Tech Industrial Biotechnology and PhD program

Research Interests

Research interests of the department include Neurobiology, Genome Informatics, Immuno-therapeutics, Plant molecular biology and Environmental Biotechnology. The department has ten state-of-the-art laboratories, viz. Neurosciences and Functional Genomics Laboratory; Environmental and Industrial Biotechnology Laboratory; Complex systems and Genome informatics Laboratory; Immuno-therapeutics Laboratory; Plant and Algal Biotechnology Laboratory, Immunology and Biochemistry Laboratory, Network Biology Laboratory; Laboratory of Medical Biotechnology and therapeutics; Coding and Biological informatics laboratory; Laboratory of Bioremediation and Industrial applications.

Research is a key focus of the department and the faculty in the department are exceptionally qualified researchers and excellent teachers with extensive international experience. They have published innumerable papers in reputed internationally acclaimed journals with very high impact factors like Chemical Reviews, Nature Genetics, Immunity, Autophagy, Aging research review Plant cell etc. Our faculty impart their extensive experience in writing books published by premier publishing houses like Nature Publishing group, Academic Press (Elsevier), Springer etc. Our faculty members are also in the editorial/ reviewer board of various journals including Nature Publishing group, Elsevier, Springer, Oxford, Wiley, Transactions, BMC, Bentham etc. Faculty members are also involved in multiple selection boards and government grant review boards.

MSC BIOTECHNOLOGY

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

Ø PEO 1: Attain advanced knowledge about biological sciences and inculcate research aptitude.

Ø PEO 2: Function professionally in a global world, capable of keeping pace with recent advances in technologies

and concepts.

- Ø PEO 3: Exercise excellent leadership qualities competent at addressing issues in a responsive, ethical, and innovative manner.
- Ø PEO 4: Contribute to excel in careers by not only being a significant part in organizational success but also creating entrepreneurship initiatives
- Ø PEO 5: To impart state-of-the-art technology and practical training in commensurate with industrial need.

PROGRAM OUTCOMES

MSc Biotechnology Post-Graduates will be able to:

1. Domain knowledge: Apply the knowledge of basic biological sciences and applied engineering fundamentals to exploring solutions for complex multidimensional problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex problems reaching substantiated conclusions

3. Design/development of solutions: Design solutions for complex problems and innovative research solutions with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to address complex biological problems with an understanding of their limitations.

6. Environment and sustainability: Understand the impact of the professional solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

7. Ethics: Apply ethical principles and commit to professional ethics, norms and responsibilities of biotechnological practices.

8. Individual and teamwork: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

9. Communication: Communicate effectively on complex engineering activities with the scientific community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

10. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological research.

PROGRAM SPECIFIC OUTCOMES (PSO):

- PSO1-To demonstrate proficiency in basic science and advanced post graduate level in-depth knowledge in Biotechnology
- PSO2-To demonstrate practical and theoretical knowledge essential for the ability to pursue PhD in relevant areas of Biotechnology.
- PSO3-To demonstrate an ability to identify careers in biotechnology domain like Pharmaceutical, Food Industry etc, and skills required to develop innovative research and development relevant to the needs of the industry.
- PSO4-To demonstrate a working knowledge of advanced biological sciences for competence in application of technological principles to biological systems
- PSO5-To be proficient in applying advanced biological principles and practices of advanced biological sciences to solve biotechnological problems.
- PSO6-To design, perform, analyze and interpret data for investigating complex problems in biotechnology and related field.

Outcome

Out	
1	Investigates the fundamental principles of covalent bonds, C, O, H- bonding, water properties making up the first hierarchy of living system. Biomolecules including carbohydrates, lipids, nucleic acid and proteins forms the basis of life. Understanding and characterization of protein structures and relation with its functions.
2	Understanding the basic principle of enzyme catalysis, its characterization and importance in metabolic regulations.
3	Understanding the structure of basic components of cells and cellular components (glycolipids, glycoproteins etc) used to generate and utilize energy in cells.
4	This section introduces key biological structures that require protein and lipids to organize in membrane- structure of cell membranes protein/lipids and fundamental of membrane transport. Nucleic acids-classification, structure and function, and their role as genetic material (central dogma)
5	Understanding that an organisms metabolism transforms matter and energy following laws of thermodynamics- Simplify the concept of Metabolism and Bioenergetics

Details of Course

S.No	
1	Unit – I
	Chemical basis of life; Composition of living matter; Water – properties, pH, ionization and
	hydrophobicity; Emergent properties of biomolecules in water; Biomolecular hierarchy;
	Macromolecules; Molecular assemblies; Structure-function relationships
	Amino acids- structure and functional group properties; Peptides and covalent structure of proteins;
	Elucidation of
	primary and higher order structures; Evolution of protein structure; Structure-function relationships in
	model proteins like ribonuclease A, myoglobin, hemoglobin, chymotrypsin etc.; Tools to characterize
	expressed proteins.
2	Unit – II
	Enzyme catalysis– general principles of catalysis; Quantitation of enzyme activity and efficiency;
	Enzyme characterization and Michaelis-Menten kinetics; Relevance of enzymes in metabolic
	regulation, activation, inhibition and
	covalent modification; Single substrate enzymes
3	Un Unit – III
	Sugars- mono, di, and polysaccharides; Suitability in the context of their different functions- cellular
	structure, energy
	storage, signaling; Glycosylation of other biomolecules - glycoproteins and glycolipids; Lipids -
	structure and properties of important members of storage and membrane lipids; lipoproteins
4	Unit – IV
	Biomembrane organization- sidedness and function; Membrane bound proteins - structure, properties
	and function; Transport phenomena.
	Nucleosides, nucleotides, nucleic acids- structure, diversity and function; sequencing; Brief overview

	of central dogma
5	Unit – V
	Bioenergetics-basic principles; Equilibria and concept of free energy; Coupled processes; Glycolytic
	pathway; Kreb's cycle; Oxidative phosphorylation; Photosynthesis; Elucidation of metabolic
	pathways; Logic and integration of central metabolism; entry/ exit of various biomolecules from
	central pathways; Principles of metabolic regulation; Regulatory
	steps; Signals and second messengers.

Suggested books:

3	L. Stryer, Biochemistry, 5th edition, W.H. Freeman and Company, 2002.

Practicals

S. No.	Aim
1	To perform Molisch Test for qualitative estimation of Carbohydrates
2	To perform Fehlings Test for qualitative estimation of reducing sugars
3	To perform Iodine Test for qualitative estimation of Carbohydrates
4	To perform Benedicts test for qualitative estimation of reducing sugars
5	To perform Bials Test for qualitative estimation of pentose sugars
6	To perform Seliwanoff test for qualitative estimation of ketose sugars
7	To perform Barfoed Test for qualitative estimation of monosaccharides
8	To perform Acrolein Test for qualitative estimation of glycerol
9	Estimation of proteins by Lowry Method

Sub: Cell and Development Biology

Teaching and Examination scheme				Credits	Hours/Week			E Du	xam ration	Relative Weights				
Sem	Subject Code	Course Title	Туре		L	Т	Р	TH	PRS	CWS	MTE	ETE	PRS	PRE
I	MSBT 103	Cell and Developme nt Biology	Core	4	3	1	0	YES	NO	25	25	50	-	-

Course outcomes:

1.	Understand the various techniques to study cell and structure and organization of biological membranes
2.	Understand the structure and function of various cell organelles
3.	Learn about the components of the endo-membrane system and cellular motility
4.	Appraise about the cellular movements and pattern Formation
5.	Gain insight into how specialized cells differentiate in plants and animals

Details of Course

S.No.	Content
1.	Unit I
	Cell Theory & Methods of Study
	Microscope and its modifications – Light, phase contrast and interference, Fluorescence, Confocal, Electron(TEM and SEM), Electron tunneling and Atomic Force Microscopy, etc.
	Membrane Structure and Function; Structural models; Composition and dynamics; Transport
	of ions and macromolecules; Pumps, carriers and channels; Endo- and Exocytosis; Membrane
	cellular recognition: Cellular junctions and adhesions: Structure and functional significance
	of plasmodesmata.
2.	Unit II Organelles
	Nucleus – Structure and function of nuclear envelope, lamina and nucleolus; Macromolecular
	trafficking; Chromatin organization and packaging; Cell cycle and control mechanisms;
	Mitochondria – structure, organization of respiratory chain complexes, ATP synthase,
	Structure- function relationship; Mitochondrial DNA and male sterility; Origin and
	evolution; Chloroplast–Structure-function relationship; Chloroplast DNA and its
2	significance; Unioroplast biogenesis; Origin and evolution
3.	
	Endo-membrane System and Cellular Motility
	Structure and function of microbodies, Golgi apparatus, Lysosomes and Endoplasmic
	Reticulum; Organization and role of microtubules and microfilaments; Cell shape and
	motility; Actin-binding proteins and their significance; Muscle
	organization and function; Molecular motors; Intermediate filaments; Extracellular matrix in
	plants and animals.
4.	Unit IV
	Cellular Movements and Pattern Formation
	Laying of body axis planes; Differentiation of germ layers; Cellular polarity; Model plants
	like Fucus and Volvox; Maternal gene effects; Zygotic gene effects; Homeotic gene effects in
	Drosophila; Embryogenesis and early pattern

	formation in plants; Cell lineages and developmental control genes in Caenorhabditis
5.	Unit – V
	Differentiation of Specialized Cells
	Stem cell differentiation; Blood cell formation; Fibroblasts and their differentiation; Cellular
	basis of immunity; Differentiation of cancerous cells and role of proto-oncogenes; Phase
	changes in Salmonella; Mating cell types in yeast; Surface antigen changes in Trypanosomes;
	Heterocyst differentiation in Anabaena; Sex determination in Drosophila.

Sub: Molecular Biology

Teaching and Examination scheme				Credits	Hours/Week			Exam Duration		Relative Weights				
Sem	Subject Code	Course Title	Туре		L	Т	Р	TH	PR	CWS	MTE	ETE	PRS	PRE
I	MSBT 105	Molecular Biology	Core	4	3	0	2	YES	YES	15	25	20	40	-

Course outcomes:

1.	Understand the intricacies of DNA structure, condensation, melting and mutation
2.	Explain the underlying mechanism of DNA replication and its regulation and also to compare and contrast DNA repair processes in prokaryotes and eukaryotes
3.	Learn basic mechanism of transcription for the synthesis of synthesis of precursor RNAs
4.	Appraise molecular mechanisms involved in the formation of mature mRNA, tRNA and rRNA
5.	Gain insight into the genetic code and the mechanism of translation and post-translational modifications

Details of course:

Unit I

DNA: Structure, Condensation, Melting & Mutation

DNA structure: Chemical composition, Watson-Crick model, A-, B-, Z-DNA, Chargaff's rule, Triplex DNA, Unusual sequences in DNA;

Hierarchy of chromatin condensation;

DNA melting and reassociation: Factors affecting melting, Absorbance, cot curve, Repetitive and unique sequences

Unit II

Prokaryotic & Eukaryotic DNA Replication and Repair

Replication: Phases of DNA replication, Enzymes and accessory proteins, Mechanism of action of various enzymes, Ultrastructure of DNA polymerase, Fidelity, Regulation, Cyclin-dependent kinase, Telomeres, Telomerase DNA repair: Photoreactivation, Base excision repair, Nucleotide excision repair, Mismatch repair, Recombinational repair, SOS repair

Unit III

Prokaryotic & Eukaryotic Transcription

Transcription: Transcription unit, Promoter, Enhancers, RNA polymerase, General and gene-specific transcription factors, Nucleosome modifiers, Chromatin remodelers, Elongation factors, Phases of transcription Operon concept: lac and trp operons, Repressor, Inducer, Catabolite repression, Attenuation

Unit IV

Post-transcriptional processing of pre-RNA in Prokaryotes and Eukaryotes

Covalent modifications in mRNA, tRNA, rRNA; 5' and 3' end processing of tRNA; Cleavage reactions by nucleases; RNA editing; Splicing: Spliceosomal splicing of GU-AG intron, Group I intron splicing and tRNA intron splicing; CCA addition, 3' poly A tail addition

Unit V

Prokaryotic & Eukaryotic Translation and Post-translational Processing

Genetic code: Universal genetic code dictionary, Genetic code of mitochondria, Degeneracy of codons, Isoaccepting tRNA, Wobble hypothesis;

Translation: Structures of mRNA, tRNA and ribosome, Soluble factors, Mechanisms of initiation, elongation and termination;

Post-translational modifications: Proteolytic cleavage, Covalent modifications, Intein splicing, Protein folding: Roles of accessory proteins

Suggested Books:

S. No.	Name of Authors / Books / Publishers
1.	Molecular Biology of the Gene by Watson et al. Publisher: Pearson
2.	Biochemistry by Voet and Voet. Publisher: Wiley
3.	Lewin's Genes by Kreb's et al. Publisher: Jones & Bartlett Learning
4.	Genomes 4 by Brown. Publisher: Garland Science
5.	Essential Molecular Biology (Practical Approach Series) by Brown. Publisher: OUP
6.	Molecular Cloning: A Laboratory Manual (3 Volume Set) by Sambrook and Russel. Publisher: Cold Spring Harbor Laboratory Press
7.	Molecular Biology of the Gene by Watson et al. Publisher: Pearson

Practicals:

S. No.	Aim
1.	DNA isolation
2.	Agarose gel electrophoresis
3.	Colorimetric determination of DNA content
4.	Absorption spectrum of DNA
5.	Quantification of DNA by UV spectrophotometric analysis
6.	DNA purity
7.	Estimation of RNA content by orcinol method
8.	DNA denaturation and renaturation studies - Melting temperature, Hyperchromic effect, Transition breadth, Hypochromic effect

Sub: Analytical Techniques

Teaching and Examination scheme	Credits	Hours/Week	Exam Duration	Relative Weights

Sem	Subject Code	Course Title	Туре		L	Т	Р	ТН	PR	CWS	MTE	ETE	PRS	PRE
Ι	MSBT1 07	Analytical Techniques	Core	4	3	0	2	YES	YES	15	20	40	25	-

COURSE OUTCOME: 1. To be able to use selected analytical techniques. 2. Familiarity with working principles, tools and techniques involved and detailed interpretation of results.. 3. To understand the applications, the strengths, limitations and creative use of techniques for problem-solving.

CO 1: To learn about buffer preparation, membrane filtration techniques, methods of cell disintegration, enzyme assays; Principles, instrumentation, sampling, and application of few spectroscopic techniques.

CO 2: To learn about classification of chromatographic techniques, their principles, instrumentation and applications; Electrophoretic Techniques: Principle, equipment, process, and application of electrophoresis in analyzing macromolecules.

CO 3: To learn basic principles of sedimentation, types of centrifuges, types of centrifugation, applications of centrifugation such as molecular weight determination using sedimentation velocity and sedimentation equilibrium methods.

CO 4: To learn principles and units of radioactivity, radioactive isotopes and their applications, radioactivity measurement by Geiger Muller Counters and solid and liquid Scintillation Counters: basic principle, instrumentation, working, autoradiography, and radiation dosimetry. To learn applications of radioactive isotopes in medicine, metabolic studies in biochemistry, radioimmunoassays and their safety aspects.

CO 5: To learn crystallization of proteins through Vapour Diffusion method, Principles of X-ray diffraction, and application of XRD in 3D structure analysis of proteins, MALDI TOF: principle, instrumentation and application, Enzyme and cell immobilization techniques and applications, DNA and peptide synthesis: techniques and applications.

Details of course

Unit I Basic Techniques

Buffers; Methods of cell disintegration; Enzyme assays and controls; Detergents and membrane proteins;Dialysis, Ultrafiltration and other membrane techniques Spectroscopy Techniques UV, Visible and Raman Spectroscopy; Theory and application of Circular Dichroism; Fluorescence; MS,NMR, PMR, ESR and Plasma Emission spectroscopy

Unit II

Chromatography Techniques

TLC and Paper chromatography; Chromatographic methods for macromolecule separation - Gel permeation, Ion exchange, Hydrophobic, Reverse-phase and Affinity chromatography; HPLC and FPLC; Criteria of protein purity Electrophoretic techniques

Theory and application of Polyacrylamide and Agarose gel electrophoresis; Capillary electrophoresis; 2DElectrophoresis; Disc gel electrophoresis; Gradient electrophoresis; Pulsed field gel electrophoresis

Unit III Centrifugation

Basic principles; Mathematics & theory (RCF, Sedimentation coefficient etc); Types of centrifuge -Microcentrifuge, High speed & Ultracentrifuges; Preparative centrifugation; Differential & density gradient centrifugation; Applications (Isolation of cell components); Analytical centrifugation; Determination of molecular weight by sedimentation velocity & sedimentation equilibrium methods

Unit IV Radioactivity

Radioactive & stable isotopes; Pattern and rate of radioactive decay; Units of radioactivity; Measurement of radioactivity; Geiger-Muller counter; Solid & Liquid scintillation counters (Basic principle, instrumentation & technique); Brief idea of radiation dosimetry; Cerenkov radiation; Autoradiography; Measurement of stable isotopes; Falling drop method; Applications of isotopes in biochemistry; Radio tracer techniques; Distribution studies; Isotope dilution technique; Metabolic studies; Clinical application;Radioimmunoassay

Unit V

Advanced Techniques

Protein crystallization; Theory and methods; API-electrospray and MALDI-TOF; Mass spectrometry; Enzymeand cell

immobilization techniques; DNA & Peptide

Synthesis.

Details of Course

Unit I

Fundamental concepts in applied probability; Exploratory data analysis and statistical inference; Probability and analysis of one and two way samples; discrete and continuous probability models; Expectation and variance; Central limit theorem; Inference; Hypothesis; Critical region and error probabilities; Tests for proportion; Equality of proportions; equality of means of normal populations(variance known, variance unknown); Chi-square test for independence; P-value of the statistic; Confidence limits; Introduction to one way and two-way analysis of variance; Data transformations

Unit II

Elements of programming languages - C and PERL; Data base concept; Database management system;Database browsing and Data retrieval; Sequence database and genome database; Data Structures an dDatabases; Databases such as GenBank; EMBL; DDBJ; Swissprot; PIR; MIPS; TIGR; Hovered; TAIR;PlasmoDB; ECDC; Searching for sequence database like <u>FASTA and BLAST algorithm</u>

Unit III

Cluster analysis; Phylogenetic clustering by simple matching coefficients; Sequence Comparison; Sequencepattern; Regular expression based pattern; Theory of profiles and their use in sequence analysis; Markovmodels; Concept of

HMMS; Baum-Welch algorithm; Use of profile HMM for protein family classification;Pattern recognition methods

Unit IV

Goals of a Microarray experiment; Normalization of Miroarray data; Detecting differential gene expression;Principal component analysis; Clustering of microarray data; Structure determination by X-raycrystallography; NMR spectroscopy; PDB (Protein Data Bank) and NDB (Nucleic Acid Data Bank); Fileformats for storage and dissemination

of molecular structure.

Unit V

Methods for modeling; Homology modeling; Threading and protein structure prediction; Structure-

structurecomparison

of macromolecules with reference to proteins; Force fields; Molecular energy minimization; MonteCarlo and molecular dynamics simulation

Details of Course

Unit I

Introduction to Macromolecules

Introduction to Biology; Macromolecules; Carbon chemistry; Proteins: Structure, folding, catalysis; Nucleicacids: storage and transfer of genetic information; Lipids: membranes, energy storage; Carbohydrates: energystorage, building blocks

Unit II

Molecular genetics

Genes; Basics of DNA replication, transcription, translation, Genome organization; Mutations;

Genetechnology

Unit III

Cell biology and energetics

Cell structure; Membranes; Function of cell organelles; Energetics; ATP and glycolysis; Respiration; Photosynthesis

Unit IV

Reproduction, Heredity, Evolution

Reproduction and Heredity; Cell division: mitosis, meiosis, gamete formation, pollination; Mendelian genetics; Evolution; Gene variation (Hardy-Weinberg principle); Darwin's theory of evolution.

Unit V

Principles of Classification

Viruses, bacteria, protists, fungi; Physiology aspects of Plants & Animals; Regulatory systems (nervous,endocrine, immune systems); Ecology; Populations and communities; Biosphere; Conservation

Details of Course

Unit I

Notation, error analysis, and probability

Scientific notation: significant digits, rounding off, scientific notation; Error analysis; Counting andProbability; Addition rules; Permutations; Combinations; Inclusion-exclusion rule; Sampling with andwithout replacement; Conditional

probability: Bayes' theorem; Independence

Unit II

Descriptive statistics and Random variables

Measures of central tendency: mean, median, mode; Expectation; Measures of spread: range, percentile, standard deviation; Higher moments: kurtosis, skew; Displaying data: Histograms, stem-and-leaf plots, boxplots, frequency distributions; Discrete random variables: Bernoulli, Binomial, Poisson, Geometric distributions, Continuous random

variables: Normal, Exponential distributions, Standard normaldistribution

Unit III

Inferential statistics and one sample hypothesis testing

Samples and populations: Random, stratified and cluster sampling. Single- and Double-blind experiments.Point and interval estimates, Sampling distributions: t, chi-square, F distributions, Hypothesis testing: nulland alternative hypotheses, decision criteria, critical values, type I and type II errors, the meaning of statistical significance, power of a

test, One sample hypothesis testing: Normally distributed data: z, t and chi-squaretests. Binomial proportion testing.

Unit IV

Multi-sample and nonparametric hypothesis testing

Two sample hypothesis testing; Nonparametric methods: signed rank test, rank sum test, Kruskal-Wallistest, Analysis of variance: One-way ANOVA. Curve fitting, Regression and correlation: simple linearregression, the least squares method,

Analysis of enzyme kinetic data. Michaelis-Menten, Lineweaver-Burkand the direct linear plot, Polynomial curve fitting.

Sub: Communication Skills

Teachi	Teaching and Examination scheme				Hou	s/Wee	ek	Exam Duratio	n	Relativo	e Weig	hts		
Sem	Subject Code	Course Title	Туре		L	Т	Р	TH	PR	CW S	MT E	ET E	PR S	PR E
Ι	MSHU 117	Communicat ion Skills	Electi ve	4	3	1	0	YES	N O	25	25	50	-	-

Details of Course

UNIT-I Process of communication Concept of effective communication- Setting clear goals for communication; Determining outcomes and results; Initiating communication; Avoiding breakdowns while communicating;Creating value in conversation; Barriers to effective communication; Non verbal communication-Interpreting non verbal cues; Importance of body language, Power of effective listening; recognizing cultural differences UNIT-II Presentation skills Formal presentation skills; Preparing and presenting using Over Head Projector, Power Point; Defending Interrogation; Scientific poster preparation & presentation; Participating in group discussions UNIT-III

Technical Writing Skills

Types of reports; Layout of a formal report; Scientific writing skills: Importance of communicating Science; Problems while writing a scientific document; Plagiarism; Scientific Publication Writing: Elements of a Scientificpaper including

Abstract, Introduction, Materials & Methods, Results, Discussion, References; Drafting titlesand framing abstracts

UNIT-IV

Computing Skills for Scientific Research

Web browsing for information search; search engines and their mechanism of searching; Hidden Web andits importance in Scientific research; Internet as a medium of interaction between scientists; Effective email strategy using the right toneand conciseness

Semester II

Sub: Immunology

Teach	ning and	Examination		Credits	Hour	s/We	ek	Exam		Relative Weights					
schen	cheme							Duration							
Sem	Subject Code	Course Title	Туре		L	Т	Р	ТН	PR	CW S	MT E	ETE	PR S	PR E	
Π	MSBT 102	Immunology	Core	4	3	0	2	YES	YES	15	25	20	40	-	

Course outcome

1	Understand the basic concepts of innate immune system
2	Appraise molecular mechanisms of adaptive immune system
3	Learn the basis of antigen-antibody interactions and develop applications of immuno-detection and therapeutics
4	Explain applications of immunological prophylaxis and novel therapeutics
5	Gain insights into clinical immunology and their applications

Details of Courses

Unit I Immunology

Fundamental concepts of the immune system Components of innate and acquired immunity; Phagocytosis; Complement and Inflammatory responses;Haematopoesis; Organs and cells of the immune system- primary and secondary lymphoid organs; Lymphocyte circulation; Lymphocyte homing; Mucosal Immunity; Antigens - immunogens, haptens; Major HistocompatibilityComplex - MHC genes, MHC and immune responsiveness and disease susceptibility, HLA typing

Unit II

Immune responses generated by B and T lymphocytes

Immunoglobulins-basic structure, classes & subclasses of immunoglobulins, antigenic determinants; Multigene organization of immunoglobulin genes; B-cell receptor; Immunoglobulin superfamily; Principles of cell signaling; Basis of self –non-self discrimination; B cell maturation, activation and differentiation; Generation of antibody diversity; T-cell maturation, activation and differentiation and T-cell receptors; Functional T Cell Subsets; Cell-mediated immune responses, ADCC; Cytokines; Antigen processing and presentation- endogenous antigens, exogenous antigens, non-peptide bacterial antigens and super-antigens; Hapten-carrier system

Unit III

Antigen-antibody interactions

Precipitation, agglutination and complement mediated immune reactions; Advanced immunological techniques-RIA, ELISA, Western blotting, ELISPOT assay, immunofluorescence, flow cytometry and immuno electronmicroscopy; CMI techniques- lymphoproliferation assay, Mixed lymphocyte reaction, Cell Cytotoxicity assays, Apoptosis, Microarrays

Unit IV Vaccinology

Active and passive immunization; Live, killed, attenuated, sub unit vaccines; Vaccine technology- Role and properties of adjuvants, recombinant DNA and protein based vaccines, Peptide vaccines, conjugate vaccines; Antibody genes and antibody engineering- chimeric and hybrid monoclonal antibodies; antibody engineering

Unit V

Clinical Immunology

Immunity to Infection : Bacteria, viral, fungal and parasitic infections (with examples from each group);Hypersensitivity

– Type I-IV; Autoimmunity; Types of autoimmune diseases; Transplantation and immunosuppressive therapy; Tumor immunology –Tumor antigens; Immune response to tumors and tumor evasion of the immune system,Cancer immunotherapy; Immunodeficiency.

Practicals

S. No.	Aim
1	Selection of animals, Preparation of antigens, Immunization and methods of bleeding, Serum separation,
	Storage.
2	Antibody titre by ELISA method.
3	Double diffusion, Immuno-electrophoresis and Radial Immuno diffusion.
4	Complement fixation test.
5	Isolation and purification of IgG from serum or IgY from chicken egg.
6	SDS-PAGE, Immunoblotting, Dot blot assays
7	Blood smear identification of leucocytes by Giemsa stain
8	Separation of leucocytes by dextran method
9	Demonstration of Phagocytosis of latex beads
10	Separation of mononuclear cells by Ficoll-Hypaque
11	Flowcytometry, identification of T cells and their subsets
12	Lymphoproliferation by mitogen / antigen induced
13	Lymphnode Immunohistochemistry (direct and indirect peroxidase assay)
14	Hybridoma technology and monoclonal antibody production.
15	Immunodiagnostics using commercial kits

Sub: Microbiology & Industrial Applications

Teaching and Examination				Credi ts Hours/Week			Exam		Relative Weights					
schem	ne							Duration						
Sem	Subject Code	Course Title	Туре		L	Т	Р	TH	PR	CWS	MTE	ETE	PR S	PR E
II	MSBT 104	Microbiology & Industrial Application s	Cor e	4	3	0	2	YES	YES	15	25	20	40	-

Course outcomes:

1	Outline the History and Introduction of Microbiology. Classify Domain and Kingdom concepts of microorganisms; Molecular methods in assessing microbial diversity
2	Understand the structure of Microbe, its growth curve, and kinetics. Gain insight the Physiology and Energetics of the cells.
3	Compare and contrast Host-Pathogen interactions; Pathogenicity islands and their role in bacterial virulence
4	Appraise the Role of microorganisms and their Influence on the Earth's Environment.
5	Learn the basics of media formulation, sterilization, and inoculum development. Summarize microbial and enzyme process technology for production of primary and secondary metabolites.

Details of Course

Unit I

Microbial Diversity & Systematics

Classical and modern methods and concepts; Domain and Kingdom concepts in classification of microorganisms; Criteria for classification; Classification of Bacteria according to Bergey's manual; Molecular methods in assessing microbial diversity; 16S rDNA sequencing.

Unit II

Microbial Growth & Physiology

Ultrastructure of Archaea (Methanococcus); Eubacteria (E.coli); Unicellular Eukaryotes (Yeast) and viruses(Bacterial, Plant, and Animal viruses); Microbial growth: Batch, fed-batch, continuous kinetics, synchronous growth, yield constants, methods of growth estimation, death of a bacterial cell. Microbial physiology and energetics of the cell

Unit III

Microbial Interactions and Infection

Host-Pathogen interactions; Microbes infecting humans, animals and plants; Pathogenicity islands and their role in bacterial virulence

Unit IV

Microbes and Environment

Role of microorganisms; Influence of Microbes on the Earth'sEnvironment and Inhabitants; Ecological impacts of microbes; Symbiosis (Nitrogen fixation and ruminantsymbiosis); Microbes and Nutrient cycles; Microbial communication system; Quorum sensing; Microbialfuel cells; Prebiotics and Probiotics

Unit V

Industrial Applications

Basic principles in bioprocess technology; Media Formulation; Sterilization; Thermal death kinetics; Batch and continuous sterilization systems; Primary and secondary metabolites; Extracellular enzymes; Biotechnologically important intracellular products; exopolymers;

Microbial processes-production, optimization, screening, strain improvement, factors affecting down stream processing and recovery; Representative examples of ethanol, organic acids, antibiotics etc.

Enzyme Technology-production, recovery, stability and formulation of bacterial and fungal enzymes-amylase, protease, penicillin acylase, glucose isomerase; Immobilised Enzyme

5.	Bioprocess Engineering Principles by P. Doran, Elsevier Science, 2013

Practicals

S.No.	Aim					
1	Sterilization, disinfection, safety in microbiological laboratory.					
2	Preparation of media for growth of various microorganisms.					
3	Identification and culturing of various microorganisms.					
4	Staining and enumeration of microorganisms.					
5	Growth curve, measure of bacterial population by turbidometry and studying the effect of temperature,pH, carbon and nitrogen					
6	Assay of antibiotics production and demonstration of antibiotic resistance.					
7	Isolation and screening of industrially important microorganisms.					
8	Determination of thermal death point and thermal death time of microorganisms.					
9	Fermentation of Sugar using Baker's yeast					
10	To test presence of starch in given food sample					

Sub: Genetic Engineering

Course Outcomes

1.	Understanding of basic principle of gene cloning and vectors used for cloning in different type of cells.
2.	Knowledge of various tools and enzymes deployed for manipulation and modification of DNA.
3.	Comparison of various methods deployed for gene delivery in host and identifying recombinant cells.
4.	Learning of skills for construction of DNA libraries and utilization of expression system.
5.	Appraisal of industrial applications of gene cloning and understanding of various challenges and ethical issues.

Details of Course

S.No.	Contents
1.	Unit I
	Basics Concepts
	DNA Structure and properties; Restriction Enzymes; DNA ligase, Klenow enzyme, T4 DNA
	polymerase, Polynucleotide kinase, Alkaline phosphatase; Cohesive and blunt end ligation; Linkers;
	Adaptors;Homopolymeric tailing; Labeling of DNA: Nick translation, Random priming,
	Radioactive and non-radioactiveprobes, Hybridization techniques: Northern, Southern and Colony
	hybridization, Fluorescence in situhybridization; Chromatin Immunoprecipitation; DNA-Protein
	Interactions-Electromobility shift assay; DNaseI footprinting; Methyl interference assay
2.	Unit II
	Cloning Vectors
	Plasmids; Bacteriophages; M13 mp vectors; PUC19 and Bluescript vectors, Phagemids; Lambda
	vectors;Insertion and Replacement vectors; Cosmids; Artificial chromosome vectors (YACs;
	BACs); Animal Virusderived vectors-SV-40; vaccinia/bacculo & retroviral vectors; Expression
	vectors; pMal; GST; pET-basedvectors; Protein purification; His-tag; GST-tag; MBP-tag etc.;
	Intein-based vectors; Inclusion bodies; Methodologies to reduce formation of inclusion bodies;
	Baculovirus and pichia vectors system, Plant basedvectors, 11 and R1 as vectors, Yeast vectors,
-	Shuttle vectors
3.	
	Cloning Methodologies
	Insertion of Foreign DNA into Host Cells; Transformation; Construction of libraries; Isolation of
	mRNA and total RNA; cDNA and genomic libraries; cDNA and genomic cloning; Expression
	cioning; Jumping andhopping libraries; Southwestern and Far-western cioning; Protein-protein
	Interactive cloning and Yeasttwo hybrid system; Phage display;
	Principles in maximizing gene expression
4.	
	PUK and its Applications

nested, reverse transcriptase, real time PCR, touchdown PCR, hot start PCR, colony PCR, cloning of PCR products; T-vectors; Proof reading enzymes; PCR in gene recombination; Deletion;							
of PCR products; T-vectors; Proof reading enzymes; PCR in gene recombination; Deletion;							
addition; Overlap extension; and SOEing; Site specific mutagenesis; PCR in molecular							
diagnostics; Viral and bacterial detection; PCR basedmutagenesis, Mutation detection:	diagnostics; Viral and bacterial detection; PCR basedmutagenesis, Mutation detection:						
SSCP, DGGE, RFLP, Oligo Ligation Assay (OLA), MCC (Mismatch ChemicalCleavage, ASA							
(Allele-Specific Amplification), PTT (Protein Truncation Test)							
5. Unit V							
Sequencing methods; Enzymatic DNA sequencing; Chemical sequencing of DNA; Automat	d						
DNAsequencing; RNA sequencing; Chemical Synthesis of oligonucleotides; Introduction of DN	A						
into mammaliancells; Transfection techniques; Gene silencing techniques; Introduction to siRN	۸;						
siRNA technology; MicroRNA; Construction of siRNA vectors; Principle and application of ge	e						
silencing; Gene knockouts and GeneTherapy; Creation of knock out mice; Disease model; Soma	c						
and germ-line therapy- in vivo and ex-vivo; Suicide gene therapy; Gene replacement; Gene							
targeting; Transgenics; cDNA and intragenic arrays; Differentialgene expression and protein							
array.

5	Technical Literature from Stratagene, Promega, Novagen, New England Biolab etc.

Practicals

_

S.No.	Aim							
1	Isolation of genomic DNA from Bacillus subtilis* genome.							
2	PCR amplification of scoC gene and analysis by agarose gel electrophoresis.							
3	Preparation of plasmid, pET-28a from E.coli DH5α and gel analysis.							
4	Restriction digestion of vector (gel analysis) and insert with NcoI and Xho.							
5	a. Vector and Insert ligation							
5	b. Transformation in E.coli DH5α							
6	Plasmid isolation and confirming recombinant by PCR and RE digestion.							
7	Transformation of recombinant plasmid in E.coli BL21 (DE3) strain.							
8	Induction of ScoC protein with IPTG and analysis on SDS-PAGE.							
9	Purification of protein on Ni-NTA column and analysis of purification by SDS-PAGE.							
10	a. Random Primer labeling of scoC with Dig-11-Dutp							
10	b. Southern hybridization of B. subtilis genome with probe and non-radioactive detection							

*Any other bacterial strain can be used.

Sub: Genetics

Teaching and Examination scheme				Credi ts	Hours/Week			Exam Duration		Relative Weights				
Se m	Subje ct Code	Course Title	Тур е		L	Т	Р	ТН	PR	CW S	MT E	ETE	PR S	PR E
Π	MSBT 108	Genetics	Cor e	4	3	1	0	YES	NO	25	25	50	-	-

Course Outcomes

1	Knowledge of the key concepts of microbial genetics and mutations.
1.	
	Understanding of properties of bacteriophages and plasmids, gene regulation,
2.	and genetic analysis using phage and plasmid.
	Understanding about the idea of inheritance at molecular level including
3.	Mendelian and non-Mendelian inheritance.
	Learning about organization of chromosomes, their structure, and mechanisms
4.	involved in genetic changes; basic concepts of developmental genetics and
	immunogenetics.
	Knowledge of mutations as a source of genetic variation; concepts of genome
5.	mapping, population genetics and evolution.

Details of Course

it I

Bacterial mutants and mutations

Isolation; Useful phenotypes (auxotrophic, conditional, lethal, resistant); Mutation rate; Types of mutations (base pair changes; frameshift; insertions; deletions; tandem duplication); Reversion vs. suppression; Mutagenic agents; Mechanisms of mutagenesis; Assay of mutagenic agents (Ames test)

Gene transfer in bacteria

History; Transduction – generalized and specialized; Conjugation – F, F', Hfr; F transfer; Hfrmediatedchromosome transfer; Transformation – natural and artificial transformation; Merodiploid generation; Gene mapping;Transposable

genetic elements; Insertion sequences; Composite and Complex transposons; Replicative and non-replicative transposition; Genetic analysis using transposons.

Unit II

Bacteriophages and Plasmids

Bacteriophage-structure; Assay; Lambda phage – genetic map, lysogenic and lytic cycles; Gene regulation;Filamentous phages such as M13; Plasmids – natural plasmids; their properties and phenotypes; Plasmidbiology - copy number and its control; Incompatibility; Plasmid survival strategies; Antibiotic resistancemarkers on plasmids (mechanism of action and resistance); Genetic analysis using phage and plasmid

Restriction-modification systems

History; Types of systems and their characteristics; Methylation-dependent restriction systems; applications.

Unit III

Mendelian Genetics

Introduction to human genetics; Background and history; Types of genetic diseases; Role of genetics inmedicine; Human pedigrees; Patterns of single gene inheritance-autosomal recessive; Autosomal dominant;X linked inheritance; Complicating factors - incomplete penetrance; variable expression; Multiple alleles;Co dominance; Sex influenced expression; Hemoglobinopathies - Genetic disorders of hemoglobin andtheir diseases.

Non Mendelian inheritance patterns

Mitochondrial inheritance; Genomic imprinting; Lyon hypothesis; isodisomy; Complex inheritancegeneticand environmental variation; Heritability; Twin studies; Behavioral traits; Analysis of quantitative andqualitative traits

Unit IV Cytogenetics

Cell division and errors in cell division; Non disjunction; Structural and numerical chromosomalabnormalities – deletion; duplication; translocation; Sex determination; Role of Y chromosome; Geneticrecombination; Disorders of sex chromosomes and autosomes; Molecular cytogenetics – Fluorescence InSitu Hybridization (FISH); Comparative Genomic Hybridization (CGH).

Developmental genetics

Genes in early development; Maternal effect genes; Pattern formation genes; Homeotic genes; Signaling andadhesion molecules.

Immunogenetics

Major histocompatibility complex; Immunoglobulin genes - tissue antigen and organ transplantation; Singlegene disorders of immune system.

Unit V Mutations; kinds of mutation; agents of mutation; genome polymorphism; uses of polymorphism. Gene mapping and human genome project Physical mapping; linkage and association Population genetics and <u>Genetic variation</u> evolution

Phenotype; Genotype; Gene frequency; Hardy Weinberg law; Factors distinguishing Hardy Weinbergequilibrium; on selection; Migration; Gene flow; Genetic drift; Human genetic diversity; Origin ofmajor human groups.

Semester III

Teaching and Examination scheme				Credi Hours/Week ts			Exam Duration		Relative Weights					
Se m	Subject Code	Course Title	Typ e		L	Т	Р	ТН	PR	CW S	MT E	ET E	PR S	PR E
Ш	MSBT201	Bioprocess Engineering and Technology	Cor e	4	3	0	2	YES	YES	15	25	20	40	-

1. Bioprocess Engineering and Technology

Course outcomes:

1.	Learn the basic principle of Biochemical engineering. Isolation, screening, maintenance, and improvement of industrially important microbes along with its growth and death kinetics.
2.	Classify and compare the different types of fermenters and their mode of operation. Outline the basics of media formulation and control of bioprocess parameters.
3.	To gain insight to the working of Downstream processes at an industrial scale. Summarize bioseparation, cell disruption, purification, packaging and effluent treatment.
4.	Understand the application of enzymes and microbes in food process operations and production.
5.	Illustrate the enzyme kinetics, its mechanism and inhibition along with production, recovery and scale up of enzymes. Classify different types of immobilization and its application.

Details of Course

Unit I

Basic principle of Biochemical engineering

Isolation, screening and maintenance of industrially important microbes; Microbial growth and death kinetics(an example from each group, particularly with reference to industrially useful microorganisms); Strain improvement for increased yield and other desirable characteristics.

Unit II

Concepts of basic mode of fermentation processes

Bioreactor designs; Types of fermentation and fermenters; Concepts of basic modes of fermentation

- Batch, fed batch and continuous; Conventional fermentation v/s biotransformation; Solid substrate, surface and submerged fermentation; fermentation economics; Fermentation media; Fermenter design- mechanically agitated; Pneumatic and hydrodynamic fermenters; Large scale animal and plant cell cultivation and air sterilization; Upstream processing: Media formulation; Sterilization; Aeration and agitation in bioprocess; Measurement and control of bioprocess

parameters; Scale up and scale down process.

Unit III

Downstream processing

Bioseparation - filtration, centrifugation, sedimentation, flocculation; Cell disruption; Liquid-liquid extraction; Purification by chromatographic techniques; Reverse osmosis and ultra filtration; Drying; Crystallization; Storage and packaging; Treatment of effluent and its disposal

Unit IV

Applications of enzymes in food processing

Mechanism of enzyme function and reactions in process techniques; Enzymic bioconversions e.g. starch and sugar conversion processes; High-Fructose Corn Syrup; Interesterified fat; Hydrolyzed protein etc. and their downstream processing; baking by amylases, deoxygenation and desugaring by glucoses oxidase, beer mashing and chill proofing; cheese making by proteases and various other enzyme catalytic actions in food processing.

Applications of Microbes in food process operations and production

Fermented foods and beverages; Food ingredients and additives prepared by fermentation and their purification; fermentation as a method of preparing and preserving foods; Microbes and their use in pickling, producing colours and flavours, alcoholic beverages and other products; Process wastes-whey, molasses, starch substrates and other food wastes for bioconversion to useful products; Bacteriocins from lactic acid bacteria – Production and applications in food preservation.

Unit V

Enzyme kinetics; Two-substrate kinetics and pre-steady state kinetics; Allosteric enzymes; Enzyme

mechanism; Enzyme inhibitors and active site determination

Production, recovery and scaling up of enzymes and their role in food and other industries;

Immobilization of enzymes and their industrial applications.

Suggested Books:

S. No.	Name of Books/Authors/Publishers
1.	Introduction to Biochemical Engineering by D.G. Rao, McGraw Hill education, 2009
2.	Shuler ML and Kargi F., Bioprocess Engineering: Basic concepts, 2nd Edition, Prentice Hall, EngelwoodCliffs, 2002
3.	Principles of fermentation technology by Stanbury and Whitaker, Elsevier Science, 2016
4.	Bioprocess Engineering Principles by P. Doran, Elsevier Science, 2013
5.	Industrial Microbiology: An Introduction by Michael J. Waites, Wiley-Blackwell, 2009

Practicals:

1.	Fermentation of Sugar using Baker's yeast.
2.	Immobilization of enzymes / cells.
3.	Preparation of Bread from Baker's yeast.
4.	To study the effect of enzyme concentration on the rate of enzyme catalyzed reaction.
5.	Estimation of reducing sugar by DNS method
6.	Determination of optimum temperature for an enzyme activity.
7.	To Determine optimum pH for an enzyme activity.
8.	To demonstrate activity of peroxidase in plant material
9.	To determine maximum enzyme activity in a given oil sample using different lipases.
10.	Study the components of Bioreactor.

Immunotechnology and Molecular Virology

Course outcomes:

1.	Learn the basic principle of Immunization and the interactions between antigen and antibody.
2.	Understanding principal, methodology and applications of various immunological techniques
3.	Learn the basic about the vaccination and vaccine development methods for several disease and also explored the potential of stem cell therapy
4.	Understanding the basics of molecular virology and further exploring the molecular mechanism of viruses and viral disease.
5.	learning the basic principle, mechanism and application of different analytical techniques

Details of Course

Unit I

Introduction to Immunotechnology

Principles of Immunization; Antigen Antibody interactions; Immuno-chemistry of Antigens immunogenecity, Antigenecity, haptens

Unit II

Immunological Techniques

Immuno assays RIA, ELISA, Western blotting, ELISPOT assay, immunofluorescence, Biosensor assays for assessing ligand –receptor interaction

Unit III

Vaccine technology

Rationale vaccine design based on clinical requirements: Hypersensitivity, Immunity to Infection, Autoimmunity, Transplantation, Tumor immunology, immunodeficiency; Active immunization, live, killed, attenuated, Sub unit vaccines; Recombinant DNA and protein based vaccines, plant-based vaccines and reverse vaccinology; Peptide vaccines, conjugate vaccines; Passive Immunization; Antibody, Transfusion of immuno-competent cells, Stem cell therapy; Cell based vaccines

Unit IV

Genome organization of bacteriophages, plant and animal viruses; Replication of viruses; Viral diseases

Unit V

Methods to study viruses; Infectivity assays like agroinfection(using *Agrobacterium*); Ultracentrifugation, electron microscopy, serological methods, immunelectrophoresisin gels, ELISA, Polymerase chain reaction; DNA and oligonucleotide microarray; Gene silencing, viral suppressors of gene silencing.

IPR & Biosafety

Teaching and Examination scheme			Credits	dits Hours / Exam Week Duration			Relative Weights								
Sem	Subject Code	Course Title	Туре			L	Т	Р	ТН	PR	CWS	MTE	ETE	PRS	PRE
III	MSBT 205	IPR & Biosafety	Core	4		3	1	0	YES	NO	25	25	50	-	-

Course Outcomes

1.	Outline the basics of Intellectual Property Rights, its history, evolution of IPR like patent, design and copyright, WIPO, TRIPS and property right.
2.	Summarize patents and understand the process of applying, requirement, and Classification.
3.	Identify the need of biosafety and other regulatory framework for the safety of living organisms.
4.	Discuss the relationship between IPR and biosafety benefits of transgenics to human health, society, and the environment.
5.	List ethical issues related to healthcare; medicine, food; agriculture, genetic engineering, and testing.
6.	Classify all the BSL levels and discuss about the importance of GMOs and LMOs with their applications in food and agriculture.

Details of Course

Unit I

Introduction to Intellectual Property

Types of IP: Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge,Geographical Indications, Protection of New GMOs; International framework for the protection of IPIP as a factor in R&D; IPs of relevance to Biotechnology and few Case Studies;

Introduction to History of GATT, WTO, WIPO and TRIPS

Unit II

Concept of 'prior art'

Invention in context of "prior art"; Patent databases; Searching International Databases;

Country-

wisepatent searches (USPTO, EPO, India etc.); Analysis and report formation

Unit III

Basics of Patents

Types of patents; Indian Patent Act 1970; Recent Amendments; Filing of a patent application; Precautionsbefore patenting-disclosure/non-disclosure; WIPO Treaties; Budapest Treaty; PCT and

Implications; Role of a Country Patent Office; Procedure for filing a PCT application

Unit IV

Patent filing and Infringement

Patent application- forms and guidelines, fee structure, time frames; Types of patent applications: provisionaland complete specifications; PCT and convention patent applications; International patenting-requirement,procedures and costs; Financial assistance for patenting-introduction to existing schemes; Publication ofpatents-gazette of India, status in Europe and USPatenting by research students, lecturers and scientists-University/organizational rules in India and abroad,credit sharing by workers, financial incentivesPatent infringement-meaning, scope,

litigation, case studies and examples

Unit V

Biosafety

Introduction; Historical Backround; Introduction to Biological Safety Cabinets; Primary Containment forBiohazards; Biosafety Levels; Biosafety Levels of Specific Microorganisms; Recommended Biosafety Levelsfor Infectious Agents and Infected Animals; Biosafety guidelines - Government of India; Definition of GMOs& LMOs; Roles of Institutional Biosafety Committee, RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs;

Risk Analysis; Risk Assessment; Risk management and communication; Overview of National Regulations and relevant International Agreements includingCartagena Protocol.

Teaching and Examination				Credi ts	Hours/Week			Exam		Relative Weights				
schen	le							Duration						
Se m	Subje ct	Course Title	Typ e		L	Т	Р	TH	PR	CW S	MT E	ETE	PR S	PR E
	Code													
II	MSBT 204	Genomics and Proteomics	Cor e	4	3	1	0	YES	NO	25	25	50	-	-

Course outcomes:

1.	To appraise various next generation DNA sequencing technologies and learn the basics of DNA fingerprinting for forensic analysis
2.	To understand the fundamentals of comparative genomics and transcriptomics and to appraise various gene expression profiling and gene function prediction techniques
3.	To comprehend genome-wide protein analysis by sequencing, electrophoretic, chromatographic and spectrometric techniques
4.	To get insight into various techniques for isolation and analysis of DNA-interacting proteins
5.	To appraise various techniques for the isolation and analysis of interacting proteins and to understand the basis of genetic interactions

Unit 1

Introduction to Genomics: Acquisition of new genes; DNA sequencing; Automated DNA sequencers; NGS technologies; Genome sequencing; Sequence assembly; DNA fingerprinting

Unit 2

Comparative and functional genomics: Genome annotation; Phylogeny; Synteny; Cluster of orthologous groups; Single nucleotide polymorphisms; Expression profiling: Expressed sequence tags, Serial analysis of gene expression, Total gene expression analysis, DNA microarray technology; Arabidopsis knockout strategies and analysis of insertional mutants

Unit 3

Introduction to Proteomics: Protein sequencing; Automated amino acid analyzer; 2D gel electrophoresis: Basic principle, Identification and analysis of proteins; Mass spectrometry: Basic principle, MALDI-TOF, Tandem MS; Multidimensional liquid chromatography

Unit 4

DNA-protein interactions: DNA binding motifs; Methods for detecting DNA-protein interactions: Chromatin immunoprecipitation assay (ChIP), Gel retardation assay, DNase I footprinting, Modification interference assay, DNA pull-down assay, Microplate capture and detection assay, Reporter assays

Unit 5

Protein interactomics: Protein motifs and domains; Methods for detecting protein-protein interactions: Coimmunoprecipitation, Yeast two-hybrid system and variants, Phage display, GFP tagging, Intein splicing; TAP tagging; Protein chips; Synthetic lethal screens; Yeast genome-wide interaction studies

GENERIC ELECTIVES (GE1)

1. MSBT 1101 Nutraceuticals and Functional Foods Details of Course

Unit I

Introduction to Nutraceuticals, Nutraceuticals bridging gap between food and drug

Unit II

Nutraceuticals in treatment for cognitive decline, Nutraceutical remedies for common disorders like Bronchitis, circulatory problems, hypoglycaemia, Types of inhibitors present in various foods and how they can be inactivated.

Unit III

Role of Probiotics and Prebiotics, Relation of functional foods & Nutraceutical, Applications of herbs to functional foods. Concept of free radicals and antioxidants; Nutritive and Non-nutritive food components with potential health effects, Sources and role of Flavonoids, carotenoids, Tocotrienols, polyunsaturated fatty acids, sterols

Unit IV

Current status of Nutraceutical Industry

Suggested Books:

Aluko, Rotimi, Functional Foods and Nutraceuticals, Springer-Verlag New York Inc., 2012. Satinder Kaur Brar, Surinder Kaur and Gurpreet Singh Dhillon, Nutraceuticals Functional Foods, 2014. Robert E.C. Wildman, Robert, Wildman, Taylor C, Handbook of Nutraceuticals and Functional Foods, Third edition

Wallace.

2. MSBT 1102 Translational Medicine Details of course

Unit I

Introduction to Biological Systems and diagnostics and therapeutics Unit II

Cancer Biology, Infectious diseases and Metabolic and physiological disorders. The course particularly focuses on cancer, infectious diseases, inflammatory diseases, cardiovascular diseases and the diseases of the nervous system, Inflammation.

Unit III

Cell biology-related processes such as cell-cell interactions, intracellular signalling and cell death and the basis for disease and therapy.

Unit IV

Technologies used within advanced translational research, such as relevant cellular and molecular biological technologies, biobanks and the methodology of the -omics. **Suggested Reading:**

- 1. **Medical physiology: principles for clinical medicine** *Rhoades, Rodney; Bell, David R.* 3. ed. : Philadelphia : Lippincott Williams & Wilkins, cop. 2009
- 2. Abbas, Abul K. Basic Immunology Lichtman, Andrew H. 3rd ed. : Saunders, 2009
- 3. Vander's Human Physiology : the mechanisms of body function *Widmaier, Eric P.; Raff, Hershel; Strang, Kevin T.; Vander, Arthur J.*11. ed. : Boston : McGraw-Hill Education, c2008
- 4. Molecular Biology of the Cell by B. Alberts et al. 6th ed. Garland Science, 2015

MSBT 1103 Algal Biotechnology

Details of Course

Unit I

Habitat; Classification of algae; Body organization; Cell Structure;

Metabolism-Nutrition & respiration Unit II

Reproduction; Life cycle, Basic culturing and analytical measurement techniques; Cultivation methods-Ponds and photobioreactors; Design of cultivation vessels; Harvest techniques; Drying techniques; Cell disruption techniques, Lipid, Protein, Carbohydrate; Organic Solvents for biomolecules extraction;

Unit III

High value chemicals from algae; Algal Biorefinery, Challenges and prospects; Algal biofuels production techniques- Biodiesel, Bioethanol, Biogas & Biohydrogen; Unit IV

Market of algal biofuels and other products- Indian & Global scenario; India Biofuels Policy, Algal strain and lipid improvement strategies-genetic engineering, chemical genetics and nutrient stress, Heavy metal removal and nutrient recovery; Commercial algal species of importance

3.

4.

5. MSBT 1104 Introductory Biology Details of Course

Unit I

Introduction to Macromolecules

Introduction to Biology; Macromolecules; Carbon chemistry; Proteins: Structure, folding, catalysis; Nucleicacids: storage and transfer of genetic information; Lipids: membranes, energy storage; Carbohydrates: energystorage, building blocks

Unit II

Molecular genetics

Genes; Basics of DNA replication, transcription, translation, Genome organization; Mutations; Genetechnology Unit III

Cell biology and energetics

Cell structure; Membranes; Function of cell organelles; Energetics; ATP and glycolysis; Respiration; Photosynthesis

Unit IV

Reproduction, Heredity, Evolution

Reproduction and Heredity; Cell division: mitosis, meiosis, gamete formation, pollination; Mendelian genetics;Evolution; Gene variation (Hardy-Weinberg principle); Darwin's theory of evolution; Ecology

- 1. Molecular Biology of the Cell by B. Alberts et al. 6th ed. Garland Science, 2015
- 2. W. K. Purves et al. Life, The Science of Biology, 7th Edition, W. H. Freeman and Co., 2003. http://www.whfreeman.com/thelifewirebridge2/
- 3. Peter H. Raven et al., Biology, 6th Edition, McGraw Hill, 2007. http://www.ravenbiology.com

Unit-I

Basic concepts of environment

Interaction between environment and biota, Environmental impact assessment, Principles of conservation, Sustainable development, Global environmental problems: UV-B radiation, ozone depletion, green house effect and acid rain.

Unit-II

Environmental pollution

Types of pollution and pollution analysis:

soils.

Suggested Readings:

1. Rittmann, Bruce E., and Perry L. McCarty. "Environmental Biotechnology: Principles and Applications." (2020).

2. Aziz, Hamidi Abdul, and Amin Mojiri, eds. *Wastewater engineering: Advanced wastewater treatment systems*. IJSR Publications, 2014.

3. Jørgensen, S. E., and Bent Halling Sørensen. "Environmental Risk Assessment." A Systems Approach to the Environmental Analysis of Pollution Minimization (2020): 10.

4. Sobti, Ranbir Chander, Naveen Kumar Arora, and Richa Kothari, eds. *Environmental biotechnology: for sustainable future*. Springer, 2018.

6. Kathleen, Talaro, and Barry Chess. Foundations in microbiology. 2018.

7. Silvestre, Bruno S., and Diana Mihaela Tîrcă. "Innovations for sustainable development: Moving toward a

sustainable future." Journal of Cleaner Production 208 (2019): 325-332.

GENERIC ELECTIVE (GE2)

6. MSBT 2061 Plant Molecular Farming Details of course

Unit I

Definition and common perception of molecular farming; Transgenic plants as bioreactorsan attractive alternative to current forms of manufacture of various compounds, Major targets for carbohydrate and lipid molecular farming Unit II

Introduction to the crucial metabolic pathways and the involved gene functions in plants & other suitable organisms, Medium-chain, saturated & mono-unsaturated fatty acids, improvement of plant oils, Production of rare fatty acids, polyunsaturated fatty acid having pharmaceutical and nutraceutical values, Various gene functions involved in the production of polyhydroxy butyrate & polyhydroxy alkanoate co-polymers Unit III

Strategies for production of biodegradable plastics in plants, Enzymes for industrial and agricultural uses, Unit IV

Medically related proteins-antibodies, subunit vaccines, protein antibiotics, production of biopharmaceuticals in plants: Chloroplast: a clean high-level expression system for

7. MSBT 2062 Advanced Biological Computing Details of course

Unit I

Monogenic and Complex Disorders: Role of Human Genetic Variations in Disease Susceptibility and Causation Unit II

Biological Sequence Analysis: Predictive Functional Analysis of Proteins and

Effect of Substitutions Unit III

Soft Computation: Machine Learning, Supervised and Unsupervised

Learning Algorithms Unit IV

Pharmacogenomics: Introduction, Management,

Databases and Tools Unit V

Programming in Bioinformatics

Suggested Books:

Bioinformatics: Sequence and Genome Analysis by D.W.Mount. Publisher:CBS Computational Molecular Biology: An Algorithmic Approach by P. A.

Unit 1- Introduction to Biological Databases:

Types, Overview of Biological Databases and Retrieve Nucleic acid databases: NCBI: Pubmed, Entrez, Blast, OMIM. Protein Databases- Primary, Functional, Composite, Secondary, Structural classification database, Sequence Formats & storage, Sequence submission to sequence Database

Unit 2- Monogenic and Complex Disorders: Role of Human Genetic Variations in Disease Susceptibility and Causation, Forms and mechanisms of genetic variation, Databases of human genetic variation, SNP databases, Mutation databases, Genetic marker and microsatellite databases, Nonnuclear and somatic mutation databases, Tools for SNP and mutation visualization.

Unit 3- Biological Sequence Analysis (Predictive Functional Analysis of Proteins and Effect of Substitutions): Pairwise and Multiple Sequence Alignment- Local alignment, Global alignment, Scoring matrices, Dynamic programming Approach: Needleman and Wunsch Algorithm, Smith and waterman Algorithm, uses of multiple sequence alignment, programs and methods for multiple sequence alignment.

Unit 4- Soft Computation: Machine Learning, Supervised and Unsupervised Learning Algorithms, Support vector machines, Neural Networks, fuzzy logic, genetic algorithms - applications to bioinformatics.

Unit 5- Pharmacogenomics: Introduction, Management, Databases, Historical Perspectives and Current Status, Management of Pharmacogenomic Information:PharmGKB, DrugBank.

Course Outcome (CO):

MSBT2602.1 Critically analyze biological databases and understand the purpose of these databases along with demonstrating the analytical skills.

MSBT2602.2 Critically analyze biological mutation databases and understand the purpose of these databases along with demonstrating the analytical skills.

MSBT2602.3 Outline the intricate interplay of genetic and environmental factors affecting disease susceptibility.

MSBT2602.4 Examine and categorize soft computing methods, including genetic algorithms, support vector machines, machine learning, and neural networks.

MSBT2602.5 Evaluate the concepts of Personalized Medicine and Pharmacogenomics through different databases.

8. MSBT 2063 Neurosciences Details of course

Unit I

Neuroscience and neurogenesis: Neurons, Glia, potentiation,

9. MSBT 2064 Biomass conversion and Biorefinery Details of course

Unit I

Biomass and Biorefinery concepts: Introduction of Biomass and Biorefinery, Fossil Energy Use and Implications, understand the concept of 1st generation, 2nd generation and advance biofuels, Introduction to Renewable Energy, Biomass Chemistry, Types of Biomass Biorenewable Resources.

Unit II

Biomass Pretreatment and bio-chemical conversions: Barriers in lignocellulosic biomass conversion, pretreatment technologies such as acid, alkali, autohydrolysis, hybrid methods, role of pre-treatment in the biorefinery concept, Physical and Thermal Conversion Processes.

Unit III

Biodiesel: Diesel from vegetable oils, microalgae and syngas; transesterification; FT process, catalysts; biodiesel purification. Bioethanol and Biobutanol advanced fermentation technologies.

Unit IV

Chemicals from Biomass: Biomass as feedstock for synthetic organic chemicals, lactic acid, polylactic acid, succinic acid, propionic acid, acetic acid, butyric acid, 1,3-propanediol, 2,3-butanedioil, PHA

Integrated Biorefinery: Biorefinery types and their features; lignocellulosic biorefinery, aquaculture and algal biorefinery, waste biorefinery, hybrid chemical and biological conversion processes, techno- economic evaluation, life-cycle assessment, policies and future R&D Biofuel Economics

Suggested Books:

Biorefineries and Chemical Processes, Design, Integration and Sustainability Analysis Jhuma sadhukhan, Kok siew ng, Elias martinez Hernandez

Advances in biotechnology Vol-II, (Fuels, chemical. food and waste treatment) Murray Moo-Young, C.W.

Chemicals from biomass, CRC Press Taylor & Francis Group, 2013 Biomass Fractionation Technologies for a Lignocellulosic Feedstock Based Biorefinery by S.I. Mussatto

10. MSBT 2065 Bioenergy Details of course

Unit-I Introduction

Global energy scenario, Indian energy scenario, types of energy sources, description of various biofuels, Bioenergy from biomass. Biofuel production.

Unit-II

Production of Bio-ethanol

Process Technology for Bioethanol production using Sugar, Starch and Lignocellulosic. Selection of microorganisms and raw materials; Unit Operations in Alcohol production, Alcohol distillation. **Unit-III**

Production of Biodiesel

Lipids as a source of biodiesel; Methods of Biodiesel Production – General procedure and large scale production; Quality Control Aspects. Biodiesel production from microalgae and future prospects.

Unit-IV

Production of Biohydrogen

Biohydrogen production by anaerobic bacteria and photosynthetic algae, Enzymes involved in biohydrogen production. Biochemical Pathway, Factors affecting biohydrogen production.

Unit-V

Applied Bioenergy

Concept of Applied Bioenergy and its advancements with other sources of energy, Recent trends in bioenergy research. Relationship of Applied Bioenergy to Economy, Sustainable development, and environmental policies.

Case studies

Suggested reading:

1. Dalena F, Basile A and Rossi C (2017) - Bioenergy systems for the future (Woodhead Publishing Series)

2. Pandey A, Chang JS, Hallenbeck PC (2013) - Biohydrogen

8. Ray Ramesh and Ramachandran S (2018) - Bioethanol production from Food crops: Sustainable sources, Interventions and Challenges

4. Khanna M, Scheffran J, Zilberman D -Handbook of Bioenergy Economics and Policy

5. Johnson F, Seebaluck V- Bioenergy for Sustainable development and International competitiveness

Lab- Bioenergy

1. Measurement of current from battery devices.

2. Production of bioethanol from fruit wastes/sugarcane/corn feedstock.

3. Detoxification of *Jatropha* seed-cake by different methods.

4. Production of Biodiesel from plant sources.

5. Biodiesel/Biogas set-up.

6. Estimation of catalytic activities of enzymes responsible for biohydrogen production.

MSCBT241 Molecular Therapeutics

Unit 1	Gene Therapy, Intracellular barriers to gene delivery Inherited and Acquired disease of gene therapy. Liposomes and nano particles mediated gene delivery.
Unit 2	Cellular therapy, Recombinant therapy, Erythropoietin Streptokinase and urokinase in thrmbosis.
	Transgenics and their use, Cloning; Ethical issues
Unit-3	Clinical Application of recombinant Technology. Monoclonal antibodies and their role in cancer
	Role of Recombinant Interferons, Insulin analogue And thier role in diabetes. Role of Cytokine
	therapy in Cancer
Unit-4	Recombinant Human growth hormone, Recombinant Coagulation Factors, Immunotherapy,
	Recombinant Human growth Hormone. Type of recombinant vaccines and clinical applications
Unit-5	Immuniostimulants, Immuno Supperesers in organ Transplants., Gene Silencing technology,
	Antisense Therapy, siRNA tissue and Organ Tranplantaion

Course Title: Nanobiotechnology

Teaching a scheme	nd Examina		Credits	Hot	ırs/We	eek	Exam Duratio	n	Relativ	e Weig	ghts			
Sem	Subject Code	Course Title	Typ e		L	Т	Р	TH	PR	CWS	MTE	ETE	PRS	PRE
III	MSBT217	Nanobiotechnology	Core	4	3	0	0	YES	YES	25	25	50		-

Course outcome:

1.	Explain the fundamental principle of nanotechnology and how the nanosizing effect influences material properties.
2.	Apply concepts of engineering, physics, and chemistry in nanoscale material developments. Describe the present and future applications of nanotechnologies and nanomaterials in medicine and healthcare and its limitations.
3.	Describe the application of bionanotechnology in bio-sensing, drug delivery, point-of-care diagnostic tools, nanomedicines, agriculture engineering, environment health and safety.
4.	To learn about MEMS technology in the development of novel bioMEMS, microfluidic devices, Biochips, and nanomedicines
5.	Determine nanomaterial safety and handling methods.

S.No	Content	Contact hours
1	Introduction: Introduction to nanotechnology and overview of nanoscale materials, effect of length scale on properties, introduction to bionanotechnology, challenges and opportunities associated with biology on the nanoscale, biological and medical applications of bionanomaterials.	6
2	Nanomaterials: Introduction to nanomaterials, General surface and colloid chemistry; Characteristics of nanoparticles, Unique functional properties of natural and synthetic biomolecular-sized (nanometer-scale) constructs such as quantum dots, carbon nanotubes, nanostructured surfaces, liposomes, artificial membranes, and molecular machines for biotechnology and medicine, Environmental behavior of nanoparticles, biological activity of nanomaterials.	10
3	Biosensors: Introduction to biosensors, the biological component, the sensor surface, Immobilization of the sensor molecule, Applications of molecular recognition elements in nanosensing of different analytes, Application of various transducing elements as part of nanobiosensors	6
4	Biophotonics and Bioimaging: Overview of imaging biological systems, from the cellular level through to whole-body medical imaging, Fluorescence spectroscopy, Miniaturized devices in nanobiotechnology - types and applications, MEMS, Lab on a chip concept	12
5	Nanotoxicology: Principles of toxicology; toxicology models, experimental toxicology studies; activation and detoxification mechanisms. Applications, Risks and Precautions: In vivo diagnosis, in vitro diagnosis, therapy, cosmetics; Environmental and Risk Prevention; Risks and Ethical considerations.	8
